

OPEN ACCESS POLICY

Open Access is the term given to making electronic versions of Research papers or any articles accessible to readers, without any subscription or 'access side' fees.

- IJCPS supports '**Open Access**': Publication costs are covered by an 'Article Processing Fees' being paid by authors upon acceptance. The final 'Research Paper or any article of record' is made available to all, immediately, without any barriers to access.
- Our fundamental goal is to advance the chemical and Physical sciences, through the effective dissemination of high quality research content.
- We seek to maximise the dissemination of the research that we publish.
- We support any and all sustainable and fair models of access. We believe that the integrity and archiving of scholarly content must be maintained throughout.
- We support the author's ability to choose where they publish their work to the benefit of the advancement of science. We do not wish authors to be discriminated against if they are unable to pay author-side fees.
- We seek to work closely with other parties, including funders and sponsoring agencies, to achieve the above goals.
- Open Access models which seek to ensure that scholarly publishing activities operate in a long term sustainable way.
- Distribution in any medium is permitted.

Benefits of open access for authors include:

- ✓ Free access for all users worldwide
- ✓ Increased visibility and readership
- ✓ No spatial constraints
